

FRP GRAVITY CHUTES

FRP GRAVITY CHUTES

Gravity chutes are used to convey materials/packages from an elevated level to a lower level via an inclined slope descending downwards. The exact slope, design and other parameters are according to application needs. They also have either single or multiple entry-exit points.

We at Sun Fibres manufacture Fibre-reinforced plastic(FRP) Gravity chutes which are durable, design specific and low cost for all kind of industry applications. Our chutes have no dependency on power as well as no moving parts and hence breakdown chances are totally eliminated. Capable of handling a variety of package types including cardboard, pouches, flexible packaging, corrugated boxes and more.

PREMIUM QUALITY

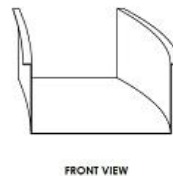

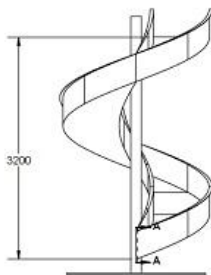

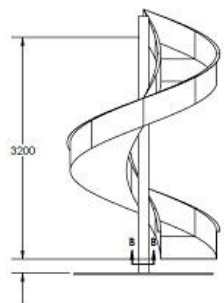

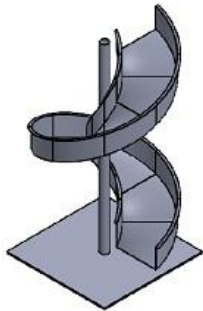

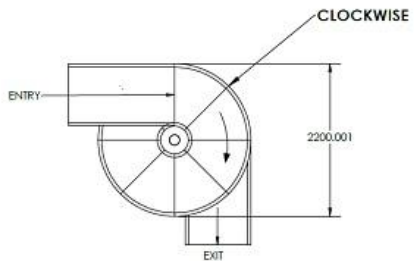

At Sun Fibres we ensure top quality raw-materials and fixtures are used along with modern high-end equipments to manufacture gravity chutes which meet every requirement of our customers. All our products go through a rigorous quality check. A smooth inner surface of FRP chutes allows effortless flow of materials reducing loss & damages.

CUSTOMIZED DESIGN

FRP gravity chutes are designed according to specifications based on individual application requirements. Desired speed of descent, angle of slope, entry and exit points and space restrictions are taken into consideration by our team in coordination with the clients to deliver a bespoke premium product.

DURABLE - LONG LIFE

Our products are manufactured to handle various kinds of materials and can withstand round the clock usage for a long time. The strength and durability provided by Fibre-reinforced plastic(FRP) ensures a long life and low-maintenance for our gravity chutes.

MULTIPLE INDUSTRY APPLICATIONS

Our products are designed to meet specific application requirements. For various sectors such as e-commerce, food processing, manufacturing, and logistics.

LOW MAINTENANCE

FRP material is resistant to wear & tear and are corrosion free, hence ensuring a long life. Minimum maintenance is required due to a uncomplicated static structure with no moving parts

QUICK AND EASY INSTALLATION

FRP chutes are prefabricated and modular which facilitates ease of transportation and reduced installation times at site with minimal add-on construction. Doesn't require a large area to be installed.

REDUCED COSTS

Our FRP Chutes don't need electricity or any other power, resulting in zero energy costs. Modular design helps reduce transportation and installation costs.

SUN FIBRES

We are a dedicated Fibreglass product manufacturing organization. Sun Fibres is an expression of revolution. It caters to the wide spectrum of industries in India.

It is renowned for manufacturing Truck Cabins under the brand name "Sun Cabs", Bus Mirror Housing, Elevation Facades and Construction Formworks commonly used in the Civil Sector, spiral chutes and various other engineering components - thanks to a well equipped manufacturing plant, skilled work force and the determined leadership of the Chairman Managing Director.
